

Evening Talk - IPOD Slurping

An iPod today can store up to 80GB of data. That is more than enough to copy huge chunks of a business's data. Even more worrying is the ease with which the data can be copied / stolen without the owner's knowledge. This threat applies to other portable devices. Unfortunately, not many are aware of the risks of portable storage devices on the network. GFI would also be able to give a live 'data theft' example. The British Computer Society Malta Section will be organizing a talk on the subject on **Monday 30th June 2008** at the **Corinthia San Gorg Hotel St Julians**. Registration will be at 6.00pm. This presentation will be given by Mr Brian Azzopardi, Manager at leading security firm GFI Software.

Members of the BCS Malta Section are informed that the annual AGM will be held at 5.15pm on the same day and same venue. Members are encouraged to attend both the AGM and talk.

It would be great if you join us for this informal presentation and networking opportunity. If you are interested in attending this topical event send an e-mail to chair@bcs.org.mt or call the one of the following nos. 7945 2015, 9945 7076 for confirmation. This event is free of charge.
